

Jamesse Prestige ... A collection at the service of Effervescence !

I used my experience of observation to think an elegant line made up of containers more slender than wine glasses and wider than flutes. The glasses Jamesse Prestige are mainly intended for the service of Champagne, they specify, weight and frame the physics linked to the effervescence.

*«The Grand Champagne glass is a revolution !
 It is very different from the classic champagne flute,
 this glass makes my job much easier!
 Its size and shape highlight the full potential of the wine.»*

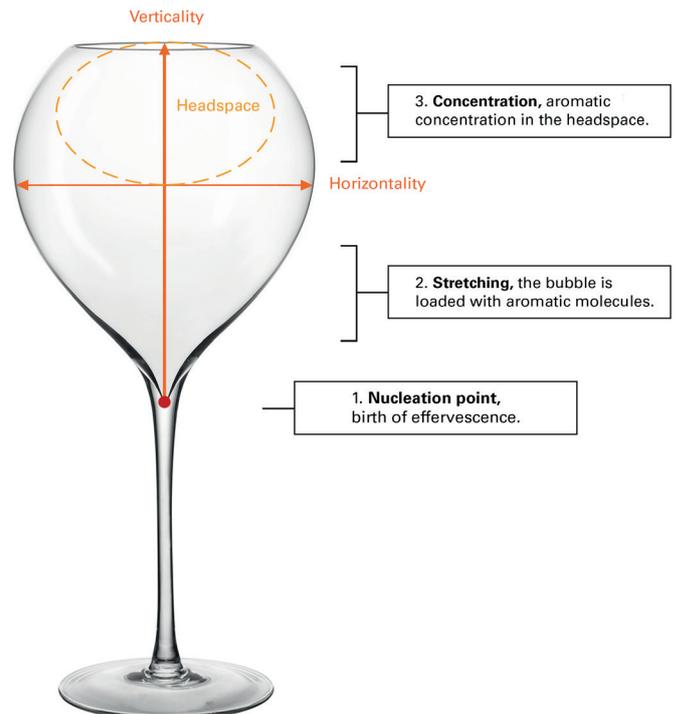

Essi Avellan, Master of Wine
 - Champagne and sparkling wine specialist

Apart from the unavoidable Grand Champagne glass, icon of the range, I have been working for several years with Grand Blanc and Grand Rouge glasses for the gastronomic experience around Champagne. Their natural and singular amplitude offers a very interesting aromatic development, their spherical shape guides the evolution of fluids without forcing them and it favors the natural behavior of effervescence.

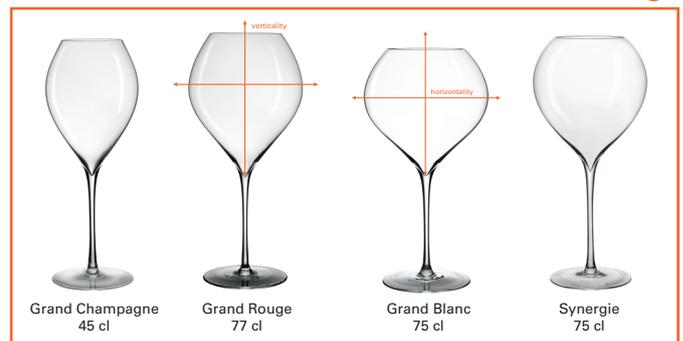

The Synergie glass is a real achievement in the desire to capture in an integral way the complexity of all that defines Champagne! Its low level of service promotes a rise of bubbles finely charged with carbon dioxide, the burst is then fine and more precise. Its spherical and proportionate shape makes it possible to match the major players linked to the aromatic expression (Dissolved CO² and the invisible CO²) for an ideal restitution.

Champagne has a variety of profiles and an infinite range of tastes, colours and ageing. Jamesse Prestige glasses help conserve and reveal all the different nuances and energy contained in Champagne wines.

Philippe JAMESSE,
 Head Sommelier at Domaine Les Crayères

Collection Jamesse Prestige

* **Vertical Stretching/verticality :**
*energy from the terroir, wine's spine, DNA
 (chalky, limestone, granite, vegetable matter ...)*

* **Horizontal Stretching/horizontality :**
*restitution of aromas
 (fruit, flower, livestock virtues...)*
